Project Details

Project Name	Jadavpur University Management System (JUMS)
Institute	Centre for Distributed Computing, Jadavpur University Funded under UGC University with Potential for Excellence Scheme (II)
Description	A part of finance module for JUMS was developed for maintaining fees collection

Project Name	Security Mechanism and Verification for Software Defined Network
Institute	Centre for Distributed Computing, Jadavpur University Funded by DRDO, Govt. of India
Description	A tool was designed to check the system configurations, evidence (logs) and network topology for SDN, NV and NFV to verify a list of predefined security policies.

Project Name	Secured Software Defined Networks
Institute	Centre for Distributed Computing, Jadavpur University Funded by DRDO, Govt. of India
Description	A Network Management System (NMS) was designed to view, update and monitor an underlying network or group of networks. The functionality of the system was based on ONOS Rest API calls. A Software Defined Security (SDS) system was designed to control, view and update the security system of ONOS as well as the underlying network topology

Project Name	Interconnected and Integrated vehicle software security
Institute	University of Gothenburg Funded by the SFO Transport/ AoA Transport at the University of Gothenburg and Chalmers University of Technology and Software Center
Description	The project deals with understanding the vulnerability and threat landscape of automotive software from different dimensions (architecture level, software component level, etc.). We also try to assess the effect of using third party libraries in some popular automotive software. Finally, we plan to utilize LLM to detect and correct vulnerable codes used in Connected Vehicle software.
